

# Inter-Professional Education - Chiropractic

Chiropractic students with an interest in inter-professional care are accepted for a one day scheduled visit.

During this visit the student will see how chiropractic care is associated with a Family Health Team and observe inter-professional patient care.

The other professionals that a student might encounter include: physicians, pharmacists, family therapists, nurses and nurse practitioners.

What makes our learning experience different is that students are exposed to a patient centred, evidence informed and inter-professional approach to care.
